

Technical Data Sheet

Longlife SRL50

Sucker Rod Lubricant

Description:

SRL-50 is a high temperature, lithium complex EP grease with excellent low temperature properties for use in frac valve bonnets and bearings and sucker rod connections under severe operating conditions of high cyclic loading. Provides excellent resistance to oxidation at elevated temperatures with exceptional performance under extreme low temperature conditions.

Applications:

Clean the connection prior to make up. Apply a thin coat of SRL-50 to the thread. CAUTION: Do not lubricate the pin shoulder face or the coupling shoulder face or a loss of tightness can occur resulting in a connection failure.

Features:

- Water insoluble and washout resistant
- Fully additive treated

Physical Properties:

- Color Red
- Temperature Range -65 to 350°F
- Consistency, Cone Penetration (D-217) 265 to 295
- Drop Point, °C None
- Thickener Inorganic
